### Volume 1 Deterministic Modeling, Methods and Analysis

This is a twenty-first century book designed to meet the challenges of understanding and solving interdisciplinary problems. The book creatively incorporates "cutting-edge" research ideas and techniques at the undergraduate level. The book also is a unique research resource for undergraduate graduate students and interdisciplinary researchers. It emphasizes and exhibits the importance of conceptual understandings and its symbiotic relationship in the problem solving process.

Contents: Elements of Matrices, Determinants, and Calculus; First-Order Differential Equations; First-Order Nonlinear Differential Equations; First-Order Systems of Linear Differential Equations; Higher-Order Linear Differential Equations; Topics in Differential Equations.

### Volume 2 Stochastic Modeling, Methods and Analysis

For more than half a century, stochastic calculus and stochastic differential equations have played a major role in analyzing the dynamic phenomena in the biological and physical sciences, as well as engineering. The advancement of knowledge in stochastic differential equations is spreading rapidly across the graduate and postgraduate programs in universities around the globe. This will be the first available book that can be used in any undergraduate/graduate stochastic modeling/applied mathematics courses and that can be used by an interdisciplinary researcher with a minimal academic background.

Contents: Elements of Stochastic Processes and Itô-Doob Stochastic Calculus; First-Order Differential Equations; First-Order Nonlinear Differential Equations; First-Order Systems of Linear Differential Equations; Higher-Order Differential Equations; Topics in Differential, Equations.

:: Notable Title

## NAVIER-STOKES EQUATIONS IN PLANAR DOMAINS

by **Matania Ben-Artzi** (Hebrew University of Jerusalem, Israel), **Jean-Pierre Croisille** (Université Paul Verlaine-Metz, France) & **Dalia Fishelov** (Tel-Aviv Academic College of Engineering, Israel)

This volume deals with the classical Navier-Stokes system of equations governing the planar flow of incompressible, viscous fluid. It is a first-of-its-kind book, devoted to all aspects of the study of such flows, ranging from theoretical to numerical, including detailed accounts of classical test problems such as "driven cavity" and "double-driven cavity".

A comprehensive treatment of the mathematical theory developed in the last 15 years is elaborated, heretofore never presented in other books. It gives a detailed account of the modern compact schemes based on a "pure streamfunction" approach. In particular, a complete proof of convergence is given for the full nonlinear problem.

This volume aims to present a variety of numerical test problems. It is therefore well positioned as a reference for both theoretical and applied mathematicians, as well as a text that can be used by graduate students pursuing studies in (pure or applied) mathematics, fluid dynamics and mathematical physics.

## BESTSELLING TEXTBOOKS

Series on Number Theory and Its Applications – Vol. 4

**PROBLEMS AND SOLUTIONS IN REAL ANALYSIS**

by Masayoshi Hata (Kyoto University, Japan)

This unique book provides a collection of more than 200 mathematical problems and their detailed solutions, which contain very useful tips and skills in real analysis. Each chapter has an introduction, in which some fundamental definitions and propositions are prepared. This also contains many brief historical comments on some significant mathematical results in real analysis together with useful references.

**Contents:** Sequences and Limits; Infinite Series; Continuous Functions; Differentiation; Integration; Improper Integrals; Series of Functions; Approximation by Polynomials; Convex Functions; Various Proof  $\zeta(2) = \pi^2/6$ ; Functions of Several Variables; Uniform Distribution; Rademacher Functions; Legendre Polynomials; Chebyshev Polynomials; Gamma Function; Prime Number Theorem; Miscellanies.

**REAL ANALYSIS (Second Edition)  
Theory of Measure and Integration**

by J Yeh (University of California, Irvine, USA)

"Finally, I recommend this book for a student who is helped by a good adviser."

*Mathematical Reviews*

This book presents a unified treatise of the theory of measure and integration.

**Contents:** Measure Spaces; The Lebesgue Integral; Differentiable and Integration; The Classical Banach Spaces; Extension of Additive Set Functions to Measures; Measure and Integration on the Euclidean Space; Hausdorff Measures on the Euclidean Space.

**FUNCTIONAL ANALYSIS****Entering Hilbert Space**

by Vagn Lundsgaard Hansen

(Technical University of Denmark, Denmark)

"This is a well-written student-friendly basic introduction to functional analysis and Hilbert space..."

*MAA Online Book Review*

"The highlight of the book is the spectral theorem for selfadjoint linear compact operators, presented with full proof. The book ends with a set of well chosen exercises completing the main text."

*Zentralblatt MATH*

**Contents:** Basic Elements of Metric Topology; New Types of Function Spaces; Theory of Hilbert Spaces; Operators on Hilbert Spaces; Spectral Theory; Exercises and Applications.

**PARTIAL DIFFERENTIAL EQUATIONS****An Introduction with Mathematica and Maple  
Second Edition**

by Ioannis P Stavroulakis (University of Ioannina, Greece) &amp; Stepan A Tersian (University of Rousse, Bulgaria)

Review of the First Edition:

"This clearly written book contains rather detailed and complete proofs and is therefore appropriate for a first semester with second year students as well as for self-instructions."

*Mathematics Abstracts*

**Contents:** First-Order Partial Differential Equations; Second-Order Partial Differential Equations; One-Dimensional Wave Equation; One-Dimensional Diffusion Equation; Weak Solutions, Shock Waves and Conservation Laws; The Laplace Equation; Fourier Series and Fourier Method for PDEs; Diffusion and Wave Equations in Higher Dimensions.

**A GUIDE TO DISTRIBUTION THEORY AND  
FOURIER TRANSFORMS**

by Robert S Strichartz (Cornell University, USA)

This important book provides a concise exposition of the basic ideas of the theory of distribution and Fourier transforms and its application to partial differential equations. The author clearly presents the ideas, precise statements of theorems, and explanations of ideas behind the proofs. Methods in which techniques are used in applications are illustrated, and many problems are included.

**Contents:** What are Distributions?; The Calculus of Distributions; Fourier Transforms; Fourier Transforms of Tempered Distributions; Solving Partial Differential Equations; The Structure of Distributions; Fourier Analysis; Sobolev Theory and Microlocal Analysis.

**LECTURES ON FUNCTIONAL ANALYSIS  
AND APPLICATIONS**

by V S Pugachev &amp; I N Sinityn

(Russian Academy of Sciences, Moscow, Russia)

This book is intended for those having only a moderate background in mathematics, who need to increase their mathematical knowledge for development in their areas of work and to read the related mathematical literature. About 300 examples and more than 500 problems are provided to help readers understand and master the theories presented.

**Applications:** Probability Theory and Statistics, Signal and Image Processing, Systems Analysis and Design.

**Contents:** Sets, Spaces and Functions; Measure Theory; Integrals; Topological Spaces; Spaces of Operators and Functionals; Linear Operators; Linear Operators in Hilbert Spaces; Spectral Theory of Linear Operators; Nonlinear Problems of Functional Analysis; Elements of Approximate Methods in Abstract Spaces.
